

Sivasree Govindaraj

Software Engineer | QA Automation

☎ +91 9600878205 # sivasreegovindaraj@gmail.com | linkedin.com/in/sivasree-g § github.com/sivasree-G + Chennai, India

Summary

QA Automation Engineer with 1+ year of hands-on experience in Manual Testing, API Testing, UI Automation, and Test Automation Framework Development. Proficient in designing and executing functional, regression, and validation test cases across enterprise and banking applications using Selenium WebDriver, Playwright, Rest Assured, Postman, and Java. Experienced in end-to-end API automation, defect lifecycle management, and CI/CD integration using Azure DevOps. Skilled in automation reporting with Allure Reports, version control with Git. Familiar with Agile/Scrum delivery within SDLC and STLC frameworks. Demonstrated ability to build automation suites from scratch, integrate them into pipelines, and deliver reliable test coverage across banking and enterprise HRMS projects.

Technical Skills

Automation & Testing Frameworks: Selenium WebDriver, Playwright, TestNG, Cucumber BDD, Rest Assured,

Programming Languages: Java, JavaScript

Frontend Technologies: HTML, CSS

Backend & API Technologies: Spring Boot, REST APIs

API Testing: Postman, Rest Assured, API Automation

Manual Testing: Test Case Design, Functional Testing, Regression Testing, Validation Testing, Negative Testing

CI/CD & Version Control: Git, GitLab, Maven, SonarQube, Azure DevOps, CI/CD Pipelines

Test Management: Jira, Asana, Allure Reports, Azure DevOps, Bug Tracking

Database: MySQL, SQL Queries

Workflow & AI Tools: n8n, Chrome Extension Development, RAG

Development & IDE Tools: IntelliJ IDEA, Visual Studio Code, MySQL Workbench

Methodologies: Agile, Scrum, SDLC, STLC, BDD, TDD

Experience

Software Engineer – QA Automation

Ticking Minds Technology Solutions Pvt. Ltd

Mar 2025 – Present

Chennai, Tamil Nadu

T-Sigma | AI-Powered Test Automation Platform | API Automation Tester

Jan 2026 – Present

- Contributed to API test design and execution across multiple modules.— designed coverage scope, identified high-risk edge cases, and executed using **Postman** and **Rest Assured (Java)** for end-to-end workflow validation.
- Built and maintained an API automation framework covering **100+ test scenarios** including positive, negative, payload-based, boundary, and regression cases — reducing manual regression effort significantly.
- Executed request-response validation, authentication testing, payload verification, and **RBAC testing** to ensure business rule compliance and application quality.
- Implemented dynamic payload handling and dependent API execution for complex multi-endpoint workflow automation and validation optimization.
- Used AI-assisted tools to accelerate test case generation and execution planning, freeing time for complex validation logic requiring human judgment.
- Configured **Allure Reports** for execution visibility and integrated automated suites into **Azure DevOps CI/CD pipelines** — enabling continuous, zero-manual-trigger regression testing.

MAF Application | *Banking Test Automation* | *Quality Engineer* | Client: BNY

Sep 2025 – Dec 2025

- Designed and developed UI automation scripts using **Selenium WebDriver**, **Java**, **TestNG**, and **Cucumber BDD** following **POM** and Page Factory design patterns for maintainability and reusability.
- Created BDD feature files, step definitions, and reusable components to automate Reject, Recycle, and Reversal banking workflows — the paths most likely to carry high-impact silent bugs.
- Executed automation suites across headed and headless environments to surface environment-specific failures before production, improving regression efficiency.
- Used AI-assisted approaches for BDD scenario creation and automation optimization, accelerating test development and broadening coverage.
- Tracked and resolved defects end-to-end in **Jira** — clear logging, timely retests, and sharp closure criteria that kept resolution cycles short and regression clean.

VistaFlow | *Enterprise HRMS Application* | *Software Engineer*

Apr 2025 – Aug 2025

- Designed and executed functional and validation test cases for User Management and Timesheet Management modules, contributing to UI design validation and usability improvements.
- Developed UI automation scripts using **Selenium WebDriver**, **Java**, and **TestNG** to validate critical workflows and improve regression coverage.
- Conducted API testing using **Postman** — validated authentication flows, request-response behaviour, and business workflow compliance across modules.
- Raised, logged, tracked, and verified **30+ defects** using **Asana**; performed retesting and regression validation after fixes to confirm resolution and application stability.

Mini Projects

API Monitoring & Automated Test Reporting | *n8n*, *Google Sheets*, *HTTP Automation*

- Built scheduled **n8n** workflows to trigger API health checks at regular intervals using HTTP request nodes and status code validation — team gets notified before any user notices a failure.
- Implemented conditional logic to distinguish success and failure responses, logging results automatically into **Google Sheets** and firing **email alerts** for proactive issue notification.

Education

Bachelor of Information Technology

Sri Sairam Institute Of Technology

• CGPA: **9.0 / 10.0**

Nov 2020 – May 2024

Chennai, Tamil Nadu

Certifications

SQL Certification | *SkillRack Core*

Java Certification

n8n No Code AI Agent Builder Certification
